

# Golvo® Lift for Vehicle Extraction

## Improving Emergency Department Transfers

"Vehicle Extraction" is an industry coined term referring to the removal of patients from their personal vehicles.

These patients may be capable of getting into the vehicle on their own (or with a relative's help), but upon arrival at the Emergency Department or other site of care, they are unable to get out without assistance. The Golvo® lift improves transfers from personal vehicles by mitigating the need for manually handling patients. Manually handling patients may cause caregiver injury and discomfort or loss of dignity for patients.

The Golvo® lift can help.

With the Golvo® lift, you are prepared to transfer patients arriving by personal vehicle.

There are several reasons or choices made that could lead to someone arriving in their personal vehicle:

- The occurring symptoms may not be critical in the eyes of the patient or they may not be as well educated on their medical troubles.
- Patients may believe they could get to the E.D. more quickly by taking private transportation versus waiting for the ambulance.
- Some patients may be in some state of denial, or are embarrassed by being sick, and do not want to admit to being sick and therefore select traveling via private transportation.

#### **Golvo® Lift features a flexible strap**

The flexible strap can extend into the vehicle for proper application of the sling loops onto the sling bar.

#### **Leave the heavy lifting to the Golvo® lift**

Caregivers will guide the patient out of the vehicle while the Golvo® lift carries the weight of the patient during the transfer.
